Why good UI feels good

and why AI slop doesn't

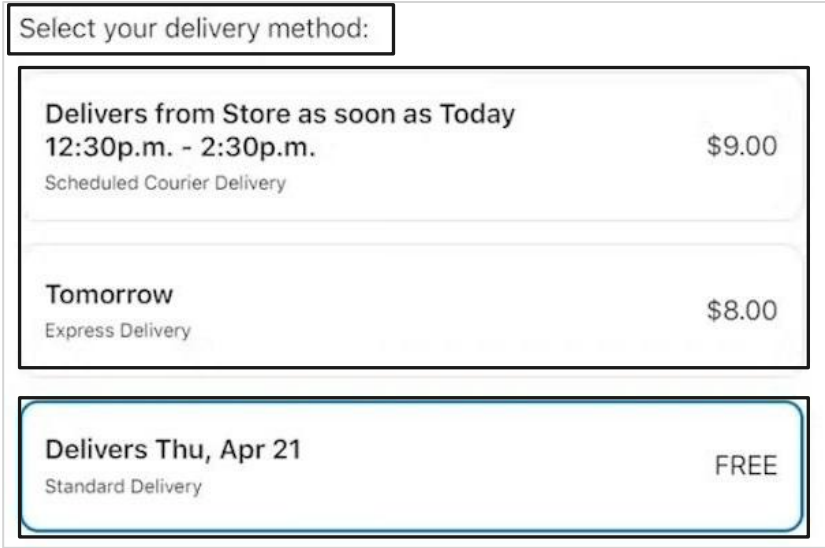

Zeki Erman · BİL 333 Mesleki Yabancı Dil-1 · 12 November 2026

First: what is UI?

User Interface

Everything you see and touch on a screen: text, buttons, icons, messages.

UX (User Experience) is the bigger story. Today: only the screen.

text

buttons

your choice

Apple checkout. Screen: Baymard Institute, 2026

Merriam-Webster, word of the year 2025

slop

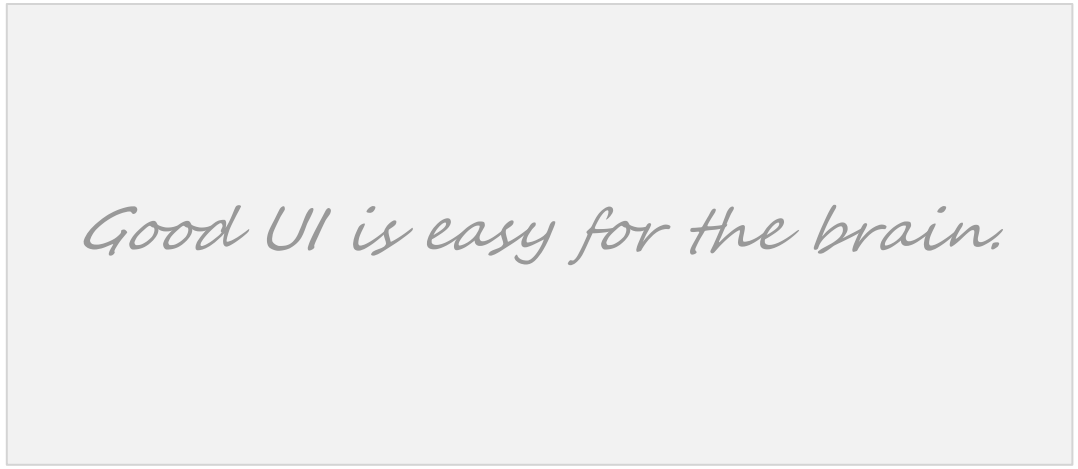

"digital content of low quality that is produced usually in quantity by means of artificial intelligence"

I can spot it in a second. Why?

AI-made ad for "Willy's Chocolate Experience", Glasgow 2024. Read the words. Image: Wikipedia, "AI slop"

The brain likes easy

harder to read

easy to read

Processing fluency: when something is easy for the brain, it feels good. We like it more.

Reber, Schwarz & Winkielman (2004), Personality and Social Psychology Review

My main idea

Bad UI makes your brain ask questions.

Good UI answers them before you ask.

Every question is a little bit of work. Less work for your brain feels good.

On the next slides: first, you have to guess. Then, you just know.

Nielsen Norman Group: "Minimize cognitive load" (2013), "Few guesses, more success" (2025)

When will it arrive?

You have to guess *Snowe: "Typically 4-7 business days"*

You just know *Apple: "Delivers Thu, Apr 21"*

Screens: Baymard Institute, Current state of checkout UX, 2026

What is wrong?

You have to guess *GameStop: "Phone number is required"*

You just know *Away: "Your card number is incomplete."*

Screens: Baymard Institute, Adaptive validation error messages, 2023

What do these icons do?

You have to guess *Linear 2026: icons only*

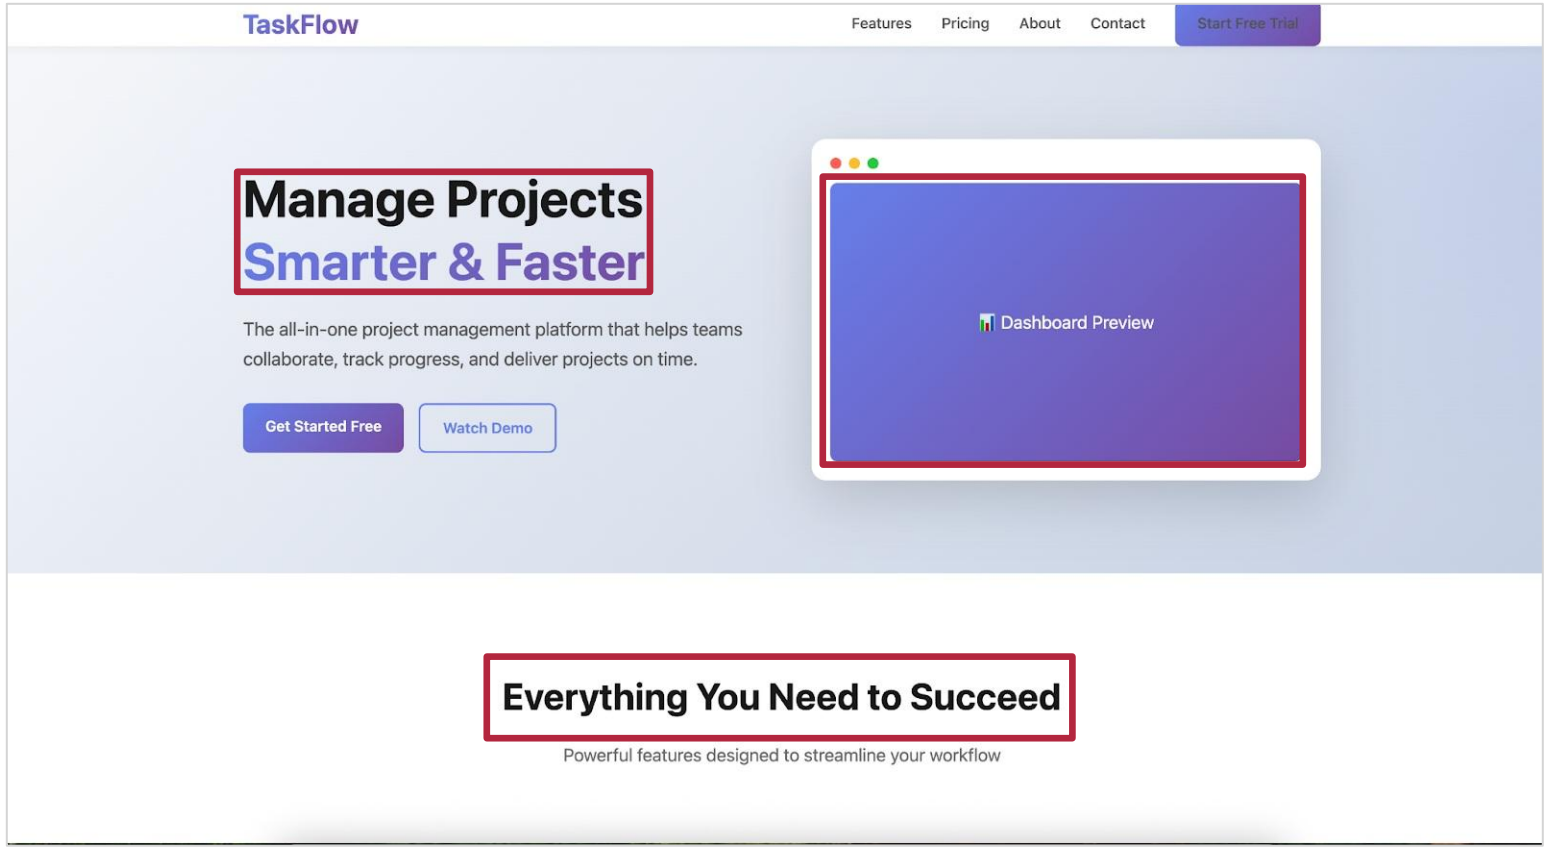

You just know *Linear before 2026: icon + word*

Screens: Linear, A calmer interface for a product in motion, 2026

Now look at AI slop

AI-made page, no design rules given. Image: Anthropic, 2025

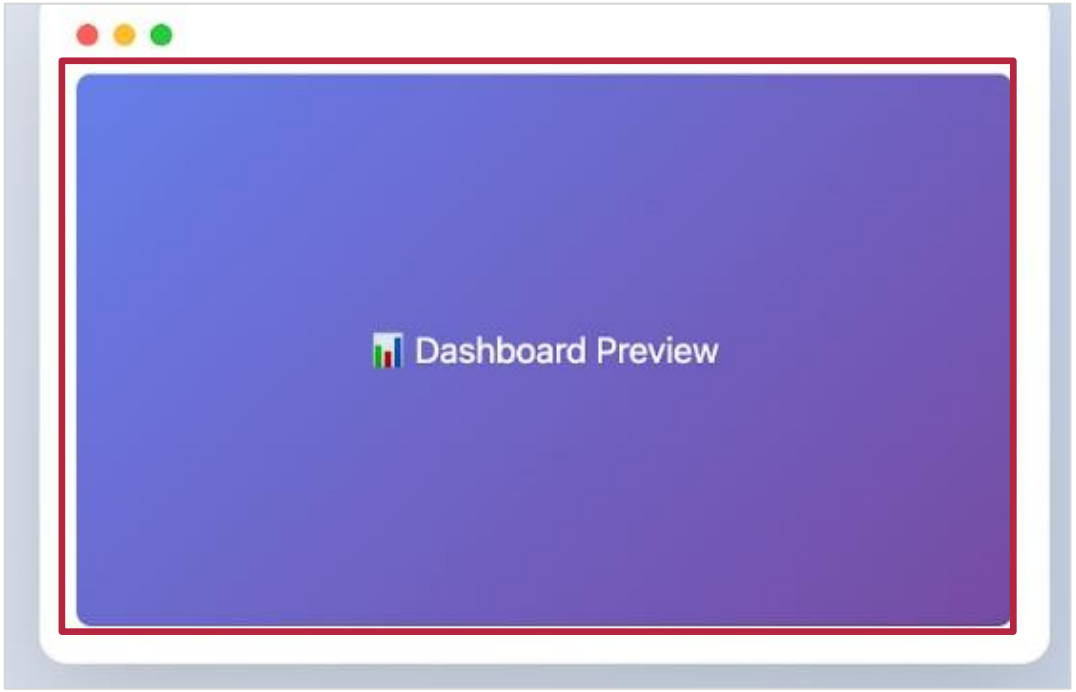

"Smarter & Faster" than what?

Dashboard Preview: where is the dashboard?

Everything You Need: which features?

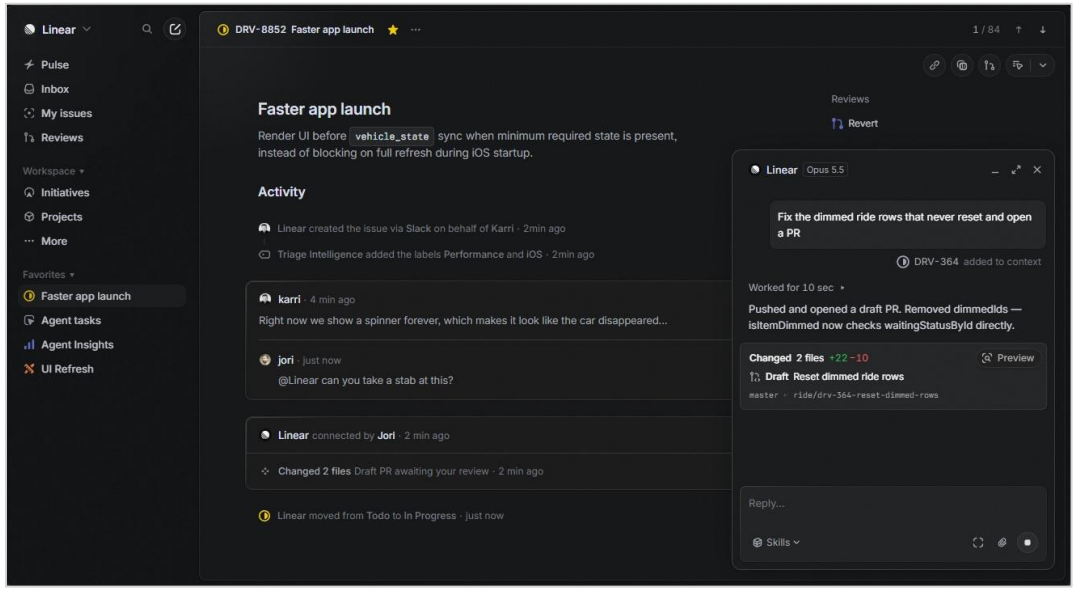

The page doesn't answer.

What does the product look like?

A purple box

AI-made page (Anthropic, 2025)

The real app

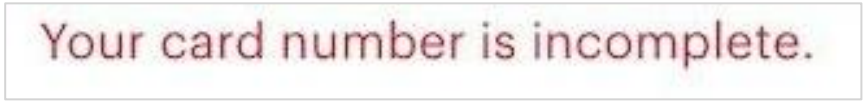

linear.app home page (screenshot, 7 November 2026)

To sum up

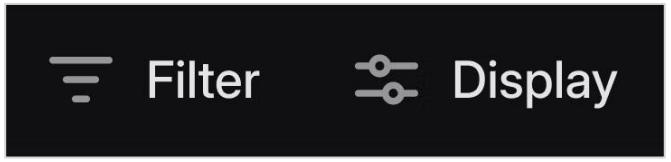

When will it arrive?

What is wrong?

What does this do?

Good UI answers your brain's questions before you ask them.

AI slop looks familiar, but it leaves the questions open.

Thank you! Any questions?
